

Quiz 1A Answers – Quiz based on 10 points

1. The `ITreat` interface does not have any methods in it, but in the `Server` class, we are attempting to call the `howMany()` method on an object that implements this interface. Thus, the signature for the `howMany()` method needs to be added to `ITreat`.

Grading:

correctly identifies problem: 2 points

correctly identifies solution: 2 points

Grading:

variable name in Named Values: 1 point

arrow pointing to object in Objects: 1 point

object in Objects with correct parameters: 1 point

3.

```
@Test
public void testHowMany() {
    assertEquals(myIceCream.howMany(), 5);
}
```

Grading:

method activated with activating object: 1 point

uses `assertEquals()`: 1 point

second parameter matches return value of `howMany()`: 1 point
